Reasons for Allowance

- Claims 1-36 are allowed.
- 2. The following is an examiner's statement of reasons for allowance:

The closest prior art references of record are Stuart (U.S. Patent No. 6,466,935) and Du et al. (U.S. Patent No. 5,826,239). Stuart (which shares an assignee with the instant application) addresses the details of managing workflow using a job status table and status change notifications; however, Stuart allocates jobs by allowing available resources to "pull" pending jobs from a queue. Stuart does not teach the use of a more active database trigger that is invoked in response to the change in status of the job in the job status table, wherein the job is processed in a just-in-time manner. Du discloses a workflow system that generally uses database triggers in one embodiment (col. 17, line 23 through col. 18, line 49) and workflow event triggers in another embodiment (col. 18, line 50 through col. 19, line 36). Still, Du does not suggest combining the functionality of both its database and workflow event triggers for use in a workflow system that employs the recited details of a job status table. Claims 1-36 recite the aforementioned features (i.e., the details of managing workflow using a job status table and status change notifications with a database trigger that is invoked in response to the change in status of the job in the job status table, wherein the job is processed in a just-in-time manner) in combination; therefore, the Examiner submits that claims 1-36 are allowable over the prior art of record.
